Lift-off with Software from OneVision

What do holidays and OneVision software have in common? At first glance certainly nothing; at second glance one might think about more relaxed working days in the prepress area, punctual leisure time and safe scheduling of holidays. But the fact that OneVision software plays a role in air safety is rather unknown.

The German subsidiary of Jeppesen, world leading supplier of aeronautical information for flight preparation and execution, trusts OneVision Asura Pro and Solvero when it comes to producing its publications. Thus airports worldwide are equipped with documentation that was optimized with OneVision software during production: amongst these are air traffic manuals, usage instructions, maintenance guidelines as well as training material and product descriptions. The fact that OneVision can increase the quality of printed products is becoming a common acceptance in the printing area...

The Digital Publishing Department in Neu-Isenburg near Frankfurt, Germany has been using OneVision Asura Pro and Solvero since 2003. "Asura Pro developed from an 'aid tool' to the main proofing tool in our department. At the beginning we only used it after having tried everything else and still were not able to process a file. Today the software secures our whole workflow", says Robert Krause, Manager Electronic Publishing at Jeppesen.

The team of the Digital Publishing department consists of five employees, who – amongst other things – prepare all incoming files for print. All different production departments send their files to them. "Before using OneVision software we had to do a lot of manual correction: Changing page formats, color conversions and so on. A lot of annoying work as the production departments of course do not know about the printing processes and thus do not know how to construct a file in the right way for printing", explains Robert Krause. Since Asura Pro was installed, the data reception has been eased a lot. Today the incoming files run through the different queues of Asura Pro depending on how they have to be processed afterwards. During this procedure, color conflicts are solved, color conversions are carried out and so on. In that way all files are automatically adapted to the requirements of the further workflow.

“Today hardly any manual intervention is necessary to prepare files for print. Utilizing Asura Pro the files are automatically adapted to the requirements of the different printers, their workflow and RIP – just perfect.”

If you really need to change things within the content of a file, whether it be a PDF, EPS or PS file, these changes can be resolved within Solvero. “That really eases our work tremendously as we finally are flexible and independent from the specialist department.” Even whole pages or colors are changed with OneVision software at Jeppesen. Additionally codes can be added to the file name giving them the correct Jeppesen naming conventions to eliminate problems such as cards being labelled differently to the file name.

Today most of the incoming data runs through OneVision software before being produced. Robert Krause regards it as main advantages that his whole department today works quicker and more efficiently. Additionally the working processes were eased and thus the whole department can react and be more flexible to new and unexpected requirements. “Jeppesen is the world leader of air safety. Internally we trust in OneVision software to minimize errors due to a high degree of automation. Thus we can guarantee the safety we provide.”
