OneVision Launches Advanced PDF Reporting Capabilities for Asura Enterprise: New visual reports provide users with ability to identify, understand and resolve file issues

Regensburg, Germany (September 13, 2007) – OneVision, a global provider of prepress and premedia software solutions to the printing and publishing industries, announced the launch of the newest version of Asura Enterprise, the online file transmission system that streamlines the file flow from customer to prepress. The latest version of Asura Enterprise includes Asura's advanced PDF Error Reporting. With this feature, users receive an exact visualization of the production file and a detailed status report with descriptions of any faulty elements that may exist in the file. Files issues can then be resolved before production.

Printers and publishers around the world use Asura Enterprise, which provides customers with the ability to remotely upload their files into the prepress workflow. After uploading a file, the customer receives an almost immediate response via email. If the file can be processed successfully, the email contains a log-report and a softproof. In case of a defective file, the customer is provided the log-report as well as a PDF Error Report which visualizes and describes the faulty elements. .

Norman Hildenbrand, Technical System Administrator of BNN (Karlsruhe, Germany) is excited about the new features of Asura Enterprise: "Asura Enterprise is one of the key functionalities in our print production workflow, and has been very well accepted by our customers to transmit their files. The new reporting features in Asura Enterprise offer totally new possibilities by providing our clients with

more detailed information about the quality of their uploaded files. Our customers can see problematic elements 24/7 without delays, long error searches, or long discussions, because everybody sees immediately what must be corrected. With the new reporting features of Asura Enterprise, we will be able to provide even better service and convenience to our customers.”

More information and technical specifications regarding Asura Enterprise are available on <http://www.onevision.com/asuraenterprise.html>

About Asura Enterprise:

OneVision’s Asura Enterprise allows an efficient and reliable networked connection between the user’s desktop and the prepress department of a publisher or commercial printer. Asura Enterprise is installed on the publisher’s or commercial printer’s web server and allows users to transmit encrypted production files (e.g. adverts) anywhere, at any time from the Internet into Asura or Asura Pro, OneVision’s flagship solutions for streamlining the print production process.

About OneVision

OneVision’s state-of-the-art prepress software is used every day by the world’s largest newspapers and magazines, leading publishers, commercial printers, and companies in the emerging area of on-demand publishing. By streamlining workflows and automating production processes, OneVision’s flagship solutions Asura and Solvero allow organizations to save time, reduce costs and ensure the highest level of quality for printed materials. Headquartered in Germany and with locations in the U.S., United Kingdom, France, and Brazil, OneVision continues to bring new solutions to companies worldwide.
